

Conceptualization

I started creating the information architecture and low-fidelity concepts for primary use cases. After having a go-ahead from the Product Manager, developers, and Stakeholders on the mockups, we began to conduct usability tests with the low-fidelity mockups. Once we had confidence in the design, we began digitalizing designs.

However some fonts, called variable fonts, can support a range of weights with a more or less fine granularity, and this can give the designer a much closer degree of control over the chosen weight.
